The number of MATURE dormice are recorded if Adults or Juveniles i.e. weaned independent dormice, are found in a box

The count is standardised to the number of litters recorded by month per 50 boxes i.e (50/no.of boxes checked) x no. of LITTERS recorded

The Spring count is the maximum of the May and Jun standardised count

The Autumn count is the maximum of the Sep and Oct standardised count

Total number of MATURE dormice in Spring and Autumn recorded in UK regions compared to Briddlesford Reserve per 50 boxes
