

## PTES FINAL REPORT

*Please note you will not be eligible to apply for another PTES grant unless you have submitted a full report using this form*

**Project title:**

**Species:**

**IUCN Red List status:**

**Project head:**

**Institute:**

**Country project is based in:**

**Grant received:**

**Project start and end date:**

**Report Due Date:**

1. **Executive summary** (300-500 words) (a summary of the whole report, with a statement on each of the following: project aim, objectives, key results and the main outcomes)
2. **Background to your project** (please provide information on the conservation value of the project work, the conservation problem and issues address, background to the project site and its conservation significance, as well as key partners. Information should include the relevance of the population in a global context e.g. some wording that tells us if this is endemic, restricted range etc or e.g. lions in Tanzania – the largest remaining population in an unprotected area, the threats as listed on the IUCN Red List)
3. **Objectives** (Please summarise the objectives of your work as set out in your application, if any objectives have changed please describe the changes and explain the reasons)
4. **Summary of achievements** - please provide these under each objective. We will use this information to prepare a short report highlighting what you have achieved to our supporters and donors. Please draw attention to the main achievements and impacts of your work funded or part funded by PTES, please include details of scientific evidence and/or anecdotal data which shows evidence of success e.g. evidence to demonstrate use of wildlife bridges over roads reduced roadkill (fewer/ no killed target species on roads where bridges are available compared with roads with no bridges), evidence documenting a specific woodland management practice increases population density due to increased food and nesting availability compared with other types of management practice.

5. **Describe the three most important outcomes of your project**
6. **How has this project helped you progress personally in your career** (maybe working closer with government agencies, recognition from peers for publishing important findings, contacts with others in different countries working on same/ similar species/ challenges)
7. **What were the biggest challenges you faced? Were you able to overcome them and if so, how? What are the most important things you have learned?** Challenges may be field-based (equipment failing, change in weather patterns resulted in movement of target species), political (obtaining licences, armed groups restricting movement) community based (unable to get local communities to engage)
8. **Would any of this be useful for other conservation practitioners working on this subject and/or area?**
9. **Commentary on budget** (please detail any changes in budget/any unspent funds)
10. **Have you shared or are you planning to share your results?** For example, where relevant, in publications (peer reviewed or otherwise), with policy makers, the media (local or national), with local communities, appropriate networks (e.g. data to IUCN, management authorities, government) or otherwise, relating to this project.
11. **Have you promoted your project or shared the findings on social media?** If so, please provide details on which social media was used and the reach, please also confirm whether PTES was acknowledged in all social media posts relating to the work we funded.
12. **Other than funding, in what ways could PTES help you further?** e.g. provide network opportunities with IUCN specialists, peers working on similar species, skills training, opportunities for media or presentations/ talks
13. **What are the next steps/plans for the future for this species, either this particular population or other populations elsewhere.** E.g. the forest now has protected status and monitoring in place, the plan is to expand that effort to three surrounding forests.
